

The original All-in-One®  
Software Suite for  
Case and Financial Management

## PerfectLaw Private Cloud™

*In an effort to compete in a challenging marketplace, law firms are seriously considering the benefits of cloud computing. This trend is fueled by the Cloud's promise of better functions and features than those found in traditional systems without the complexities and costs associated with maintaining them.*

*With the PerfectLaw® Cloud, firms will benefit from the latest technology, reliable access to their applications, and the confidence of industry-leading disaster recovery systems. Virtually eliminated will be the high costs associated with servers, multiple vendors and personnel. Moreover, firms will be working on proven systems, designed and optimized to run PerfectLaw Software. Plus, firm administrators will find their in-house networks are simpler and more reliable, allowing them to focus less on IT and more on managing the firm.*

**PERFECTLAW®**  
**ALL-IN-ONE® SOFTWARE**

### Benefit from Top Level IT Professional Support

- Scalability – add or remove network resources (CPUs, RAM, disk storage, and logins) effortlessly
- Benefits of cloud storage and cloud computing
- Reduce costs, infrastructure maintenance and IT staff workload
- Reduce IT hassles and administrative time spent on technology issues
- Worry-free Business Continuity & Disaster Recovery

### Functionality

- Backup databases offsite with automatic versioning
- Built-in disaster recovery capabilities
- Eliminate the need to upgrade and patch your infrastructure
- 99.9%+ platform uptime\*
- Enhance mobility; log into applications and access data at anytime from anywhere
- Provide multi-office support and distributed networking
- Increase security and reduce cyber-crime, hacking and virus attacks
- Improve your document, email and information security

### Additional Cloud Services

- Mobility and multi-office support
- Encrypted private networks
- Industry-leading anti-virus protection
- Email archiving
- Rapid scalability
- Access the same technology used by many of the AMLAW 100 firms

## Why go to the PerfectLaw Private Cloud™?

**Trust** - As a PerfectLaw user you already know our staff. Under the PerfectLaw Private Cloud you will be working with a familiar team of support engineers eliminating the need to incur the time and risk of vetting other vendors.

**Training** - Avoid the need and expense associated with training hosting personnel on how to install and maintain PerfectLaw.

**Configuration** - There's no need to move, convert or test your configuration on a third party host.

**Guarantee** - We guarantee your software configuration will run in the PerfectLaw Private Cloud.

• • •

### The PerfectLaw Private Cloud Advantage:

- Better Software Functionality
- Greater Ease-of-use
- Increased Security
- Improved Global Access
- Expanded Computing Power & Storage
- Higher Availability
- Built-in Disaster Recovery
- Performance Guarantees
- Predictability - Day After Day Reliability
- Reduced Capital Investment & Total Cost of Ownership
- Pared-down Hardware and Software requirements
- Lower Maintenance Liability
- Decreased need for Training and Consulting

## Firms that move core infrastructure to the cloud are finding it's making a big impact on their business:

- **Migration** - Relocating all or part of the Firm's network, including servers and software to the cloud eliminates the need to manage and maintain it; saving both IT support and administration time.
- **Experience** - Cloud Service Providers (CSPs), through the use of specialized automation tools and industry-accepted best practices, can maintain a firm's core infrastructure better than the firm.
- **Consistency** - CSPs standardize equipment and technology while keeping it up to date; this eliminates the patchwork of dated PCs, network parts and unpatched software found in many firms.
- **Security** - Through the use of firewalls, security protocols, monitors and spam filters, cloud infrastructures are specifically designed with security in mind.
- **Mobility** - Device independent technology can connect with smart phones, tablets, laptops and desktops. Device independence improves multi-location support, making the firm network simpler yet more flexible.
- **Scalability** - Infrastructure resources can be quickly added or removed without the costly investment:
  - Upgrading servers to overcome obsolescence and capacity limitations is time consuming and costly. In the cloud you can easily provision additional capacity to handle an increase in demand as well as de-provision during a slowdown on an as needed basis.
  - Consider the scenario when firms need to test IT upgrades. Cloud scalability allows the firm to spin up a test environment quickly for a limited time and then de-provision (and stop paying) once testing is complete. Those without this type of scalability or spare capacity are forced to implement raw, error prone systems or invest in expensive testing environments.
- **Multi-Office and distributed networking** - Multi-location networking and data sharing increases IT complexity with respect to software distribution, licensing, version control and sharing. Cloud computing shifts this burden of complexity from the firm to the cloud service provider thereby reducing overhead costs.
- **Staffing** - Keeping up with the daily advancements in technology requires talented professionals who are trained and certified. Keeping qualified IT staff is even harder than recruiting them. Therefore, it is far more effective for firms to get the support they need from the professionals at a cloud service provider.
- **Reliability through Redundancy** - Redundancy equals reliability and uptime. Achieving a level of reliability appropriate to the value of a firm's critical workload can be complicated and expensive. From system components to network infrastructure to power systems, the best defense against failure and downtime is redundancy. Allowing the CSP to own, manage and maintain your core infrastructure provides firms the flexibility to adapt to a continually changing business environment.
